

MOHAMMED SHOAIB

Aspiring Full Stack Developer.

Bangalore, Karnataka | +91 7892666933 | shoaib232002@gmail.com | LinkedIn | GitHub | Portfolio

EDUCATION

Master of Computer Application

AIMS Institutes, Bangalore.

2023 - 2025

CGPA: 8 / 10.0

Bachelor of Computer Application

PES College of Arts & Science, Mandya.

2021 - 2023

CGPA: 8.38 / 10.0

CERTIFICATES

- **Advanced Excel and Power BI:**
AIMS Institutes(2025)
- **Prompt Engineering for everyone:** Cognitive IBM Skills(2025)
- **Blockchain Workshop:**
AICST(2025)
- **Postman API Fundamentals:**
Let's Upgrade(2024)
- **Full Stack Web Development:**
TECH MINDSPARC INNOVATIONS(2024)
- **Machine Learning:**
Internshala(2023)
- **Android App Development:**
Internshala(2023)
- **Job and Internship Training:**
Internshala(2023)

EXTRACURRICULAR

- Participated in AI.NXT Summit at Microsoft Luxor
- Competed in Intercollegiate IT Quiz (RVITM, 2025)
- Participated in multiple college tech fests
- Earned 28 Skill Badges & 6 Trophies on Microsoft Learn

SOFT SKILLS

- Problem-solving
- Communication
- Teamwork
- Adaptability
- Leadership

PROFESSIONAL SUMMARY

Full Stack Developer currently working at Quintype Technologies, contributing to production web products and optimizing Core Web Vitals across multiple publisher websites. Experienced in building end-to-end applications using React.js, Node.js, Express.js, and MongoDB, with exposure to WebRTC, Socket.IO, and AI/ML integration gained across 4 internships. Proven ability to independently own features from API design to responsive UI delivery, seeking a full stack role to build scalable, impactful products.

SKILLS

- **Languages:** JavaScript, Python, C, Kotlin
- **Frontend:** React.js, HTML, CSS
- **Backend:** Node.js, Express.js, REST API Development
- **Databases:** SQL, MongoDB.
- **Tools & Platforms:** Git, GitHub, Postman, Figma, Vercel
- **Data & Analytics:** Excel, Power BI
- **Technologies:** Generative AI APIs

WORK EXPERIENCE

Intern | Quintype Technologies

Software Developer

Oct 2025 - Ongoing

- Built a Linux CLI timezone utility adopted for internal developer use, reducing context-switching time during cross-timezone collaboration
- Engineered an interactive CSS browser game in both Vanilla JS and React, demonstrating component-based architecture and reducing code duplication by ~40%
- Contributed to a production web product alongside the frontend team, shipping features used by live readers across multiple publisher platforms
- Optimized Core Web Vitals (LCP, CLS, INP) for 6 publisher websites, achieving Google's performance thresholds and improving SEO rankings and user experience scores
- Developed a Chrome extension to detect and visualize Cumulative Layout Shift (CLS) events in real time while browsing web pages.

Intern | Pentagon Space

MERN Stack developer.

July 2025 - Oct 2025

- Completed an intensive MERN stack training program covering React, Node.js, Express, and MongoDB through hands-on real-world feature building
- Strengthened problem-solving and code-structuring skills across full-stack modules, focusing on API design, Git workflows, and clean UI development
- Performed well enough during training to secure a software developer role at Quintype Technologies before program completion

Intern | Microsoft Internship by Edunet Foundation

Foundations of Artificial Intelligence.

Apr 2025 - May 2025

- Completed intensive training on AI fundamentals, including Machine Learning, Deep Learning, and Generative AI.
- Built and deployed "Fake Job Postings Detection" — a Flask app integrating a Random Forest model with TF-IDF vectorization — achieving reliable fraud classification on unseen job descriptions

Intern | TECH MINDSPARC INNOVATIONS

Full Stack Web Development.

July 2024 - Oct 2024

- Completed a 3-month virtual Full Stack Web Development Internship, gaining hands-on experience in frontend and backend development.

PROJECTS

Edu-Verse

[GitHub link](#)

- Architected a full-stack virtual classroom platform using React, Node.js, MongoDB, and WebRTC, supporting real-time video, live chat, and push notifications via Socket.IO for concurrent multi-user sessions
- Implemented JWT-based authentication and OTP-driven password reset with role-based dashboards for Students, Teachers, and Admins, ensuring zero unauthorized access across user roles
- Delivered end-to-end academic workflows — assignment upload/submission/grading, notes sharing, scheduling, and cloud file management — consolidating 5+ classroom functions into a single platform

Resume Genie Web Application

[Demo link](#)

- Integrated an AI-powered chatbot in a Resume Builder web app to enhance user interaction and provide real-time resume-building assistance.
- Tech Stack: ReactJS, MongoDB, Node.js, Express.js, Tailwind CSS, Gemini API.

Delicious Recipe Web Application

[GitHub link](#)

- Built a full-stack Food Recipe App features user authentication, categorized recipes (Veg, Non-Veg, Snacks), and a responsive UI.
- Tech Stack: Html5, CSS3, JavaScript, Express, MySQL.

Fake Job Posting Detection

[GitHub link](#)

- Developed a Flask web application to detect fake job postings by integrating a trained Random Forest model with a TF-IDF vectorizer, enabling users to input job descriptions and receive real-time fraud predictions.
- Tech Stack: Html5, CSS3, Flask.

Animation Arcade

[Demo Link](#)

- Designed a 10-level cricket-themed CSS animation learning game where users write real CSS code to progress, making an abstract web concept tangible and engaging

Timezones CLI Tool

[Demo Link](#)

- Published a Linux/macOS CLI tool supporting live, continuously updating world time display across major cities, improving developer productivity during cross-timezone work
